## Non Functional Requirements

There are some nonfunctional requirements for the Hospital Management system

## Performance

How fast a user can go through the system and page how fast is the page load time

## Scalability

The user may be of large number so system can be capable of accepting load of at least 500 users at a time. So load of users must not compromise the system Performance

## Availability

The System should be available 24/7 so that user can do any task any time.

## Maintainability

The system should be maintainable at any cost as it acquires data of many users

## Security

This system should be secure as it contains data of every patient and it is confidential data

## Usability

As it can be used by layperson so it should be made easy to use.
